

Model Explainability Report

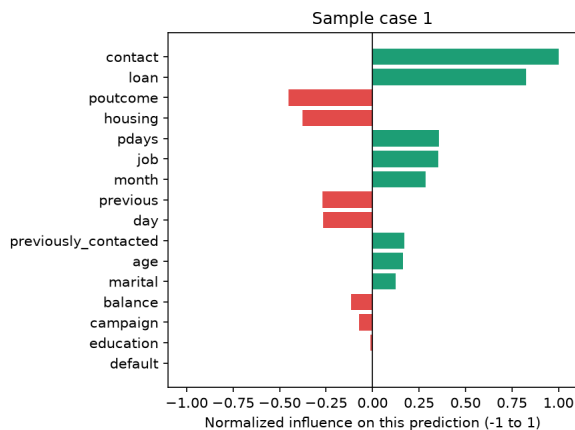

Model tested	Bank Marketing - Random Forest
Endpoint	http://0.0.0.0:8000/bank_marketing
Task type	classification
Data points analyzed	50
Report generated	2026-09-15 18:58

A sensitivity score shows how strongly each factor influences the model's output; a higher score means that factor has a bigger effect on the prediction. The scores provided are normalized to a 0-1 scale, representing each feature's share of total measured sensitivity.

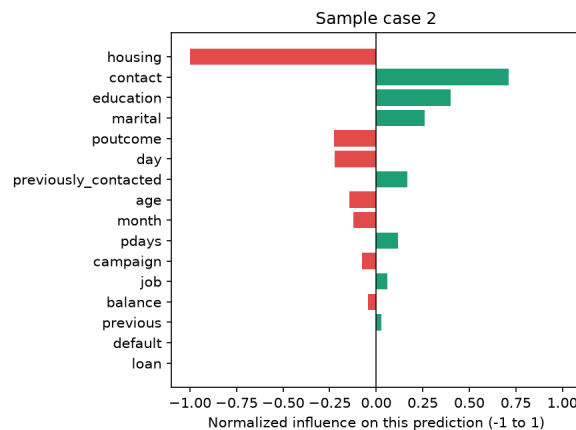

Feature sensitivity

The following examples show specific real scenarios and what most influenced each prediction.

Input values:

- **age:** 45.00
- **balance:** 12,345.00
- **day:** 15.00

Input values:

- **age:** 34.00
- **balance:** 3,025.00
- **day:** 12.00

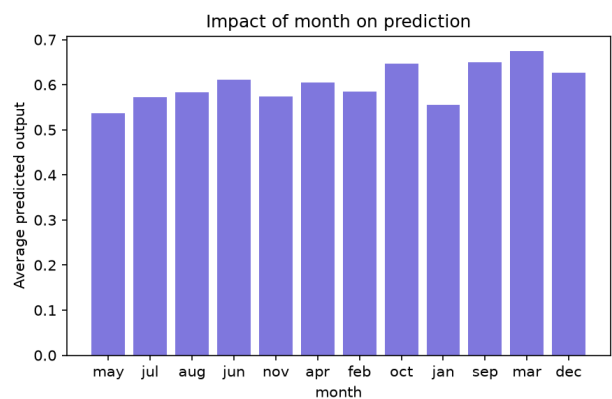

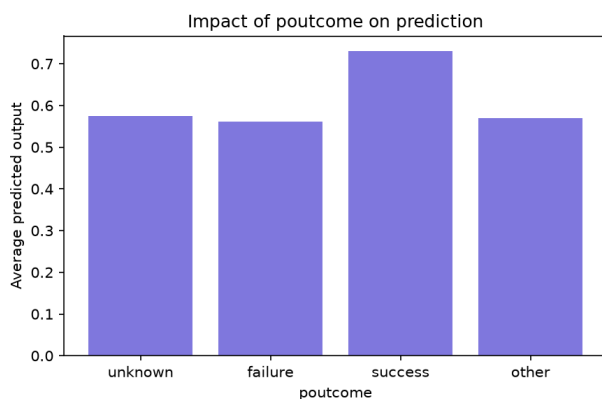

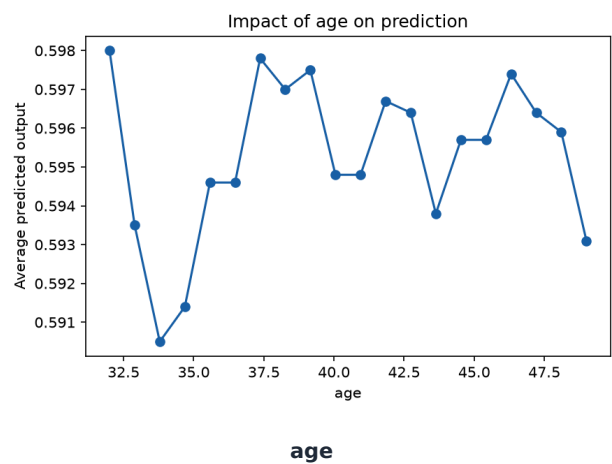

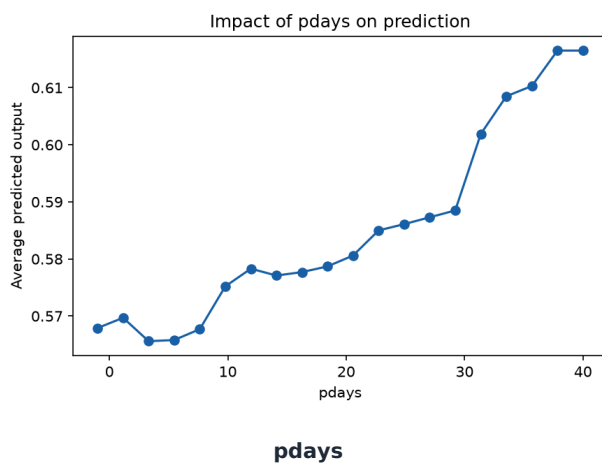

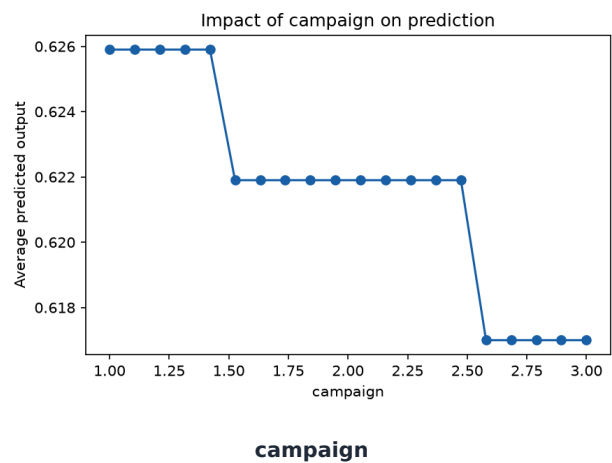

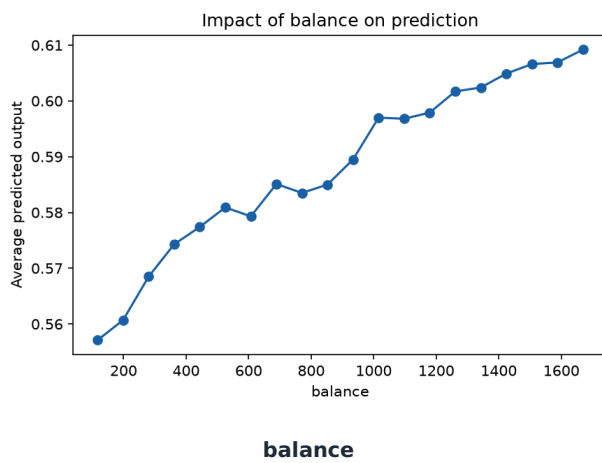

- **campaign:** 3.00
- **pdays:** 20.00
- **previous:** 0.00
- **previously_contacted:** 0.00
- **job:** technician
- **marital:** married
- **education:** tertiary
- **default:** no
- **housing:** yes
- **loan:** no
- **contact:** cellular
- **month:** jun
- **poutcome:** unknown

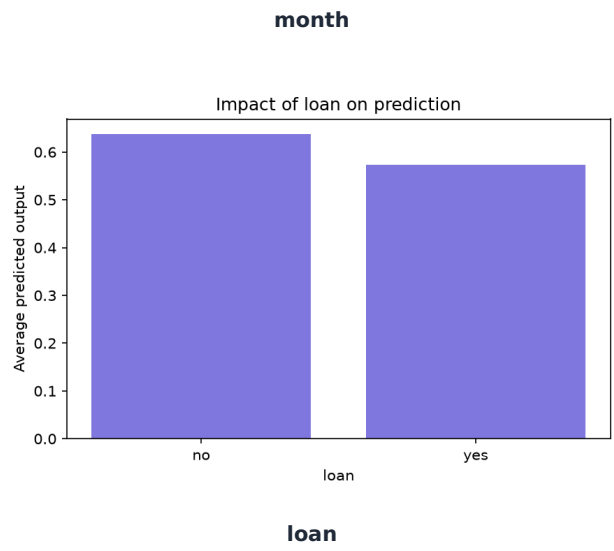

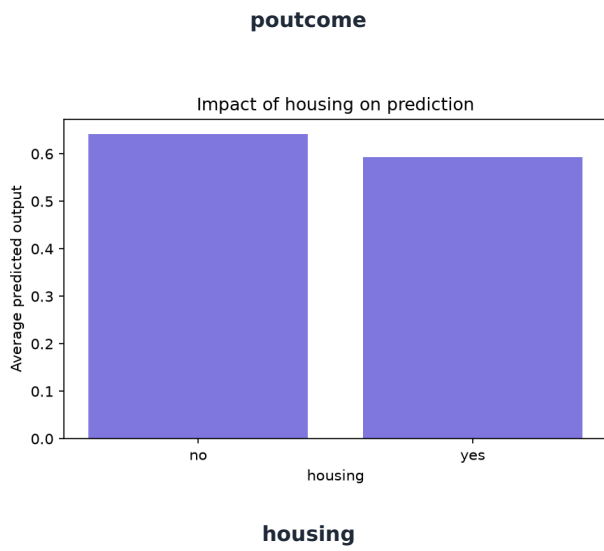

Predicted probability: 0.610

- **campaign:** 2.00
- **pdays:** -1.00
- **previous:** 0.00
- **previously_contacted:** 0.00
- **job:** technician
- **marital:** single
- **education:** tertiary
- **default:** no
- **housing:** yes
- **loan:** no
- **contact:** cellular
- **month:** aug
- **poutcome:** unknown

Predicted probability: 0.620

The charts below show how the predicted output changes as each factor varies, while other factors remain typical of the dataset.

These results should be used as a starting point for review and discussion, rather than a final verdict on the model's performance or reliability.
